

Centricity Centerwise™

100 word description

Centricity Centerwise™ is a software system that helps enterprises and service providers deliver applications more effectively, more reliably, and with better business outcomes. By providing dynamic bandwidth allocation to users and their applications, Centerwise ensures smoother and more predictable application performance at a lower cost. Priorities can be established for users, groups and for critical business applications, ensuring that application service delivery is maximized. The customizable Virtual Help Desk provides proactive user feedback to reduce unnecessary help desk calls and minimize user frustration. Centerwise easily manages existing network applications, and provides the reliability you need when deploying new business applications. (100 words)

50 word description

Centricity Centerwise™ is a software system that ensures more effective delivery of business-critical applications. Dynamic bandwidth allocation based on user and application priorities means better application performance and lower costs. The Virtual Help Desk proactively helps to reduce user frustration. Centerwise provides the reliability needed by both new and existing business applications. (52 words)
